and that is
YOU

Custom solutions are as individual as you are.

Your business requires automation and you choose from hundreds of "Off the shelf" software available in the market. While purchasing an off-the-shelf software package one may be impressed by all the features it offers, but in reality the majority of businesses use at most 10% of the features in their applications - although they still pay for the whole package. As a SME with individual needs, it may be a far better option to choose a custom-made package. In effect your business will no longer pay for functions it does not need. Custom-made software ensures the software does exactly what the company requires and is flexible enough to meet changing market conditions.

EMPOWER YOUR BUSINESS WITH A SOFTWARE THAT WORKS ACCORDING TO YOUR SYSTEM

Since custom software is developed for a single customer it can accommodate that customer's particular preferences and expectations. Custom software may be designed in stage by stage processes, allowing all nuances and possible hidden dangers to be taken into account, including issues which were not mentioned in the specifications. Especially the first phase in the software development process may involve many departments.

Step ahead of your competitors with Lionwave, the customized platform from Promarc.

A solution tailored exactly to your needs

Lionwave custom solutions range from small adaptations of your standard solution package to newly developed solutions designed to meet your unique business process requirements.

Optimization of your business processes

Our custom solutions support all business processes within your organization, enabling you to address a multitude of challenges. Ultimately, this can help to drive efficiency throughout your value chain.
